

Product Information

T-2001

GENERAL DESCRIPTION

T-2001 is a general purpose batching demulsifier chemical for problem emulsions, production stimulation, and anti-sludge applications.

This product is designed to rapidly break particularly stable water in oil emulsions, such as slop oil, over treated oil, or dead oil.

T-2001 is also designed for use in a hydrocarbon squeeze for emulsion block removal to stimulate a damaged well.

RECOMMENDED USAGE

T-2001 will stimulate oil production by reducing interfacial tension between oil, water and the producing formation.

This product will remove emulsion blocks and also act as a sludge dispersant in removing solid particles. For stimulation or emulsion block removal It is recommended that the use of T-2001 at 1.5 % in a hydrocarbon solvent. For drilling fluids additions of 0.2-1.0L/m³ is recommended.

TYPICAL PHYSICAL PROPERTIES

Specific Gravity	.9160
Flash Point °C	18
Freeze Point °C	-35
pH	4
Solubility	Hydrocarbon

HANDLING

T-2001 is a class B2, D1B, D2B controlled product under the WHMIS system.

Refer to MSDS information for specific precautions and handling.

AVAILABILITY

T- 2001 is available in 20L pails.
